

2. My Water Footprint

Calculate your personal water footprint using the extended calculator at:

<http://waterfootprint.org/en/resources/interactive-tools/personal-water-footprint-calculator/personal-calculator-extended/>

Your individual water footprint is equal to the water required to produce goods and services you consumed. The calculations are based on the water requirements per unit of product as in your country of residence (use USA).

Personal calculator - extended

Your individual water footprint is equal to the water required to produce the goods and services consumed by you. Please take your time and feel free to use the extended water footprint calculator to assess your own unique water footprint. The calculations are based on the water requirements per unit of product as in your country of residence.

Note: put decimals behind a point, not a comma (e.g. write 1.5 and not 1,5).

United States of America ▾

Your Water Footprint is (m³/y):
